Masterarbeit

Energy and CO2 footprint of cloud/backend processing

Erisa Hoxha

Course of Study: Computer Science

Examiner: Prof. Dr. Marco Aiello

Supervisor: Prof. Dr. Marco Aiello

Commenced: November 22, 2023

Completed: May 22, 2024

Abstract

1 Introduction

1.1 Motivation

Climate change is one of the hottest topics of this century. GHG contribute the most in heating of the planet. It is estimated that data centers alone cause 3.7% of all greenhouse emissions, thus exceeding the emissions from commercial flights in 2022. The demands for IT services and technologies have been increasing with the advancements of machine learning, AI, cloud gaming, streaming etc. Data storage is estimated to reach 175ZB in 2025[[zhou2021role](#)]. This growth of data processing and data storage has improved the quality of our life, but at the same time hundreds of MtCO₂ are released yearly from this. As of today, USA has the largest number of data centers in the world with more than 2000 sites, thus causing highest carbon footprint per country based. While in the beginning of the century these data centers were not build thinking about their environmental impact, this has seemed to change in the recent years. There have been improvements in the way data centers are build, where they are build and there has been refinement in the hardware used. So the same algorithm can be executed in less power consumption. Many institutions have already migrated their services to clouds and decreasing their overall footprint. With big cloud providers like AWS, companies can decide where they want to host their services and can track

Figure 1.1: Total Data Traffic Forecast through 2030. Source: “Impact of AI on Electronics and Semiconductor Industries”, IBS, April 2020

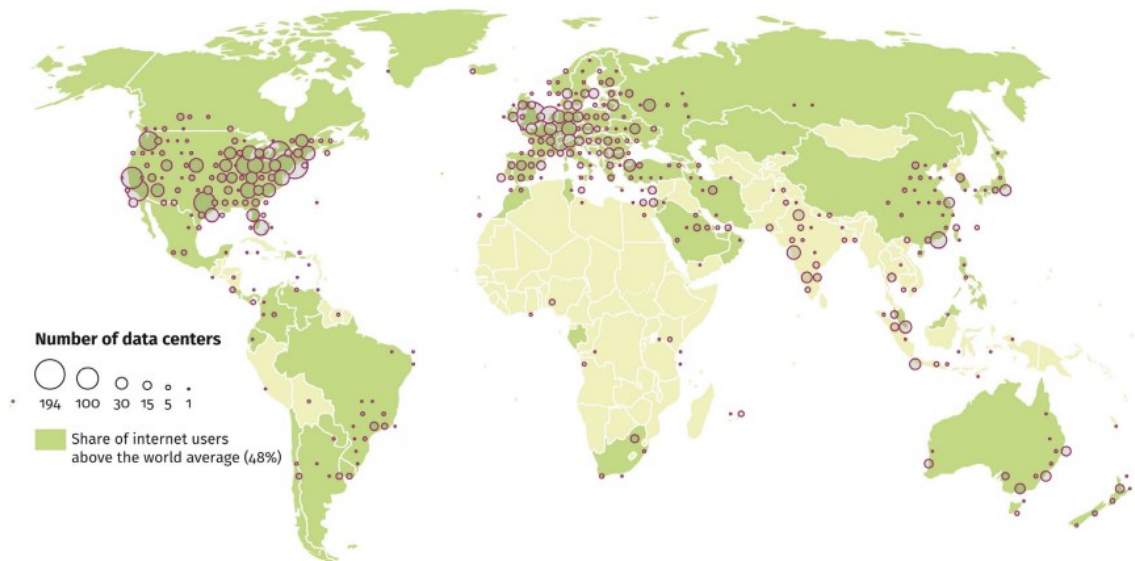

Figure 1.2: Data Center distribution worldwide

their environmental effect while the resources are being managed more efficiently. Big companies have advanced in reducing carbon release and Google today uses 100% green energy. But other smaller companies still do not have the right mastery energy management.

Instructions that that a computer what actions to perform are mainly softwares[**Britannica_2024**]. Software does not consume energy by itself directly, it directs and influences the operations of hardware, therefore causing carbon emissions. In a survey committed by programmers, only 18% of them stated that they build these programs with efficiency in mind. Considerable work has been done in the development of software with sustainability at its core, thanks to the advancements made in Software Engineering for Sustainability (SE4S). Nevertheless, since this is a relatively new field of study, there is still a significant amount of work to be carried out in this area.

IT in some way has improved our lives in terms of: Life Satisfaction (Trust and Safety), Mobility (Culture and Sports), Integration (Sustainability) and Public Services[**nevado2019improving**]. Now we can attend a company meeting from the comfort of our own homes instead of commuting to office and therefore lowering overall carbon release. Also there exist data centers that are just tackling the CO₂ release itself. So, IT has done more good in terms of carbon emissions, but with the newest researches, the situation can be improved a lot still in terms of electricity production, space and thermal management. GeSISmarter report from 2020 stated the that greenhouse gas emissions can be reduced by 16.5% (9.1GtCO₂) with effective use of IT[**cosar2019carbon**].

1.2 Problem statement

In 2006, the British mathematician and entrepreneur Clive Humby coined the phrase “Data is the new oil” [**humby2006data**]. Michael Palmer expanded on Humby’s quote by saying, “like oil, data is valuable, but if unrefined it cannot really be used [Oil] has to be changed into gas, plastic,

chemicals, etc to create a valuable entity that drives profitable activity; so, data must be broken down and analyzed for it to have value”[palmer2006]. As of March 2024 there are currently 10593 data centers worldwide with US leading this with 5381 data centers[data_centers_2024].

Data centers constructed in the past did not take into consideration the environmental considerations. However, as the demand for various products, systems, and activities grew, it became evident that they had a significant carbon footprint. [zhu2023future] concluded:

1. Approximately 20–40% of the energy consumed by DC can be reduced by optimizing IT equipment, including server layout adjustment, virtualization technology, and storage equipment improvement.
2. Approximately 15–27% of the energy consumed by DC can be reduced via research and development of advanced cooling technologies, including natural cooling and liquid cooling to achieve sustainability.
3. DCs’ ECER strategies are affected by the differences in geographical location, natural resources and economic basis, and the single energy-saving method is difficult to meet the goal of zero-carbon emission.
4. The key challenges and potential opportunities in the future decarbonization path of DCs are summarized from the perspectives of policy reform, technological innovation, and resource diversification and management, which is great significance to the realization of zero-carbon DCs and the sustainable development of human society.

1.3 Structure

In the following, the structure is outlines as follows:

- Chapter 2 is the background of this all this and has three subpoints: Energy, Greenhouse Gases and Data Centers
- Chapter 3 is the Study Design along where I included my research questions and the methodology in my research used to find answers for those questions
- Chapter 4 is about all about Energy. In this chapter I studied separately the energy used for running servers and energy used for cooling
- Chapter 5 is the hardware footprint of data centers in years
- Chapter 6 is about Cloud and Virtualization and answers the research question 4
- Chapter 7 is about Energy saved from data centers and clouds and the concept of Carbon-Free Energy Data centers
- Chapter 8 - here there are the conclusions from my my research

Figure 1.3: Source Statista[statista_2024]

2 Chapter Two

LaTeX hints are provided in Appendix A.

3 Heading on Level 0 (chapter)

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters of the alphabet and it should be written in of the original language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but the length of words should match the language. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$.

3.1 Heading on Level 1 (section)

Hello, here is some text without a meaning. $d\Omega = \sin \vartheta d\vartheta d\varphi$. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. $\sin^2(\alpha) + \cos^2(\beta) = 1$. This text should contain all letters of the alphabet and it should be written in of the original language $E = mc^2$. There is no need for special content, but the length of words should match the language. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$.

3.1.1 Heading on Level 2 (subsection)

Hello, here is some text without a meaning. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. This text should show what a printed text will look like at this place. $a \sqrt[n]{b} = \sqrt[n]{a^n b}$. If you read this text, you will get no information. $d\Omega = \sin \vartheta d\vartheta d\varphi$. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language. $\sin^2(\alpha) + \cos^2(\beta) = 1$.

Heading on Level 3 (subsubsection)

Hello, here is some text without a meaning $E = mc^2$. This text should show what a printed text will look like at this place. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. If you read this text, you will get no information. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information

about the selected font, how the letters are written and an impression of the look. $a\sqrt[n]{b} = \sqrt[n]{a^n b}$. This text should contain all letters of the alphabet and it should be written in of the original language. $d\Omega = \sin\vartheta d\vartheta d\varphi$. There is no need for special content, but the length of words should match the language.

Heading on Level 4 (paragraph) Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. $\sin^2(\alpha) + \cos^2(\beta) = 1$. If you read this text, you will get no information $E = mc^2$. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. $\sqrt[n]{a} \cdot \sqrt[n]{b} = \sqrt[n]{ab}$. This text should contain all letters of the alphabet and it should be written in of the original language. $\frac{\sqrt[n]{a}}{\sqrt[n]{b}} = \sqrt[n]{\frac{a}{b}}$. There is no need for special content, but the length of words should match the language. $a\sqrt[n]{b} = \sqrt[n]{a^n b}$.

3.2 Lists

3.2.1 Example for list (itemize)

- First item in a list
- Second item in a list
- Third item in a list
- Fourth item in a list
- Fifth item in a list

Example for list (4*itemize)

- First item in a list
 - First item in a list
 - * First item in a list
 - First item in a list
 - Second item in a list
 - * Second item in a list
 - Second item in a list
- Second item in a list

3.2.2 Example for list (enumerate)

1. First item in a list
2. Second item in a list
3. Third item in a list
4. Fourth item in a list
5. Fifth item in a list

Example for list (4*enumerate)

1. First item in a list
 - a) First item in a list
 - i. First item in a list
 - A. First item in a list
 - B. Second item in a list
 - ii. Second item in a list
 - b) Second item in a list

A LaTeX Hints

We cannot solve our problems with
the same level of thinking that
created them

(Albert Einstein)

One sentence per line. This rule is important for the usage of version control systems. A new line is generated with a blank line. As you would do in Word: New paragraphs are generated by pressing enter. In LaTeX, this does not lead to a new paragraph as LaTeX joins subsequent lines. In case you want a new paragraph, just press enter twice (!). This leads to an empty line. In word, there is the functionality to press shift and enter. This leads to a hard line break. The text starts at the beginning of a new line. In LaTeX, you can do that by using two backslashes (`\`). This is rarely used.

Please do *not* use two backslashes for new paragraphs. For instance, this sentence belongs to the same paragraph, whereas the last one started a new one. A long motivation for that is provided at <http://loopspace.mathforge.org/HowDidIDoThat/TeX/VCS/#section.3>.

One can write *emphasized text (rendered in italics)* and **bold text**.

A.1 File Encoding and Support of Umlauts

The template offers full UTF-8 support. All recent editors should not have issues with that.

A.2 Citations

References are set by means of `\cite[key]`.

Code:

```
Example: \cite{WSPA} or by author input: \citet{WSPA}.
```

Result:

```
Example: [WCL+05] or by author input: Weer-  
awarana et al. [WCL+05].
```

The following sentence demonstrates 1. the capitalization of author names at the beginning of the sentence, 2. the correct citation using author names and the reference, 3. that the author names are a hyperlink to the bibliography and that 4. the bibliography contains the name prefix “van der” of “Wil M. P. van der Aalst”.

Code:

```
\Citet{RVvdA2016} present a study on the effectiveness of workflow management systems.
```

Result:

Reijers et al. [RVA16] present a study on the effectiveness of workflow management systems.

The following sentence demonstrates that you can overwrite the text part of the generated label using label in a bibliopgraphie-entry, but the year and the uniqueness are still generated by biber.

Code:

```
The workflow engine Apache ODE \cite{ApacheODE} executes \BPEL processes reliably.
```

Result:

The workflow engine Apache ODE [ASF16] executes BPEL processes reliably.

Code:

```
Words are best enclosed using \texttt{\textbackslash qq\{..\}}, then the correct quotes are used.
```

Result:

Words are best enclosed using \qq{..}, then the correct quotes are used.

When creating the Bibtex file it is recommended to make sure that the DOI is listed.

A.3 Formulas and Equations

Code:

```
Equations  $f(x)=x$  inside the text can be provided.
```

Result:

Equations $f(x) = x$ inside the text can be provided.

A list with all available mathematical symbols is provided at <http://texdoc.net/pkg/symbols-a4>.

Code:

```
As an example, the set of natural numbers is given by  $\mathbb{N}$ .
```

Result:

As an example, the set of natural numbers is given by \mathbb{N} .

Listing A.1 The code is separated by two horizontal lines in the listings environment.

```
<listing name="second sample">
  <content>not interesting</content>
</listing>
```

For the documentation of editing mathematical formulas read the package documentation of `amsmath`¹.

Equation A.1 is numbered and can be referenced in the text:

Code:

Result:

```
\begin{align}
  \label{eq:test}
  x = y
\end{align}
```

(A.1)
 $x = y$

The following equation is not numbered because of using `\align*` as environment.

Code:

Result:

```
\begin{align*}
  x = y
\end{align*}
```

$x = y$

The template offers `\abs` to enable the bars to scale well at the absolute value:

Code:

Result:

```
 $\abs{X}$ .
```

$|X|$.

The documentation available at <http://www.ctan.org/tex-archive/help/Catalogue/entries/voss-mathmode.html> provides more details about mathematical environments.

A.4 Sourcecode

Listing A.1 shows how to embed source code. With `\lstinputlisting` the source code can be loaded directly from files.

¹<http://texdoc.net/pkg/amsmath>

Algorithm A.1 Sample algorithm

```

procedure SAMPLE( $a, v_e$ )
  parentHandled  $\leftarrow (a = \text{process}) \vee \text{visited}(a'), (a', c, a) \in \text{HR}$ 
  //  $(a', c' a) \in \text{HR}$  denotes that  $a'$  is the parent of  $a$ 
  if parentHandled  $\wedge (\mathcal{L}_{in}(a) = \emptyset \vee \forall l \in \mathcal{L}_{in}(a) : \text{visited}(l))$  then
    visited( $a$ )  $\leftarrow$  true
    writeso( $a, v_e$ )  $\leftarrow$   $\begin{cases} \text{joinLinks}(a, v_e) & |\mathcal{L}_{in}(a)| > 0 \\ \text{writes}_o(p, v_e) & \exists p : (p, c, a) \in \text{HR} \\ (\emptyset, \emptyset, \emptyset, false) & \text{otherwise} \end{cases}$ 
    if  $a \in \mathcal{A}_{basic}$  then
      HANDLEBASICACTIVITY( $a, v_e$ )
    else if  $a \in \mathcal{A}_{flow}$  then
      HANDLEFLOW( $a, v_e$ )
    else if  $a = \text{process}$  then // Directly handle the contained activity
      HANDLEACTIVITY( $a', v_e$ ),  $(a, \perp, a') \in \text{HR}$ 
      writes•( $a$ )  $\leftarrow$  writes•( $a'$ )
    end if
    for all  $l \in \mathcal{L}_{out}(a)$  do
      HANDLELINK( $l, v_e$ )
    end for
  end if
end procedure

```

Code:

Source code is also available in the text \
 lstinline|<listing />|.

Result:

Source code is also available in the text <listing
 />.

A.5 Pseudocode

Algorithm A.1 shows a sample algorithm.

Figure A.1: Example Choreography

And if you want to write an algorithm that goes over several pages, you can only do this with the following **dirty** hack:

Algorithmus A.2 Description

code goes here
test2

A.6 Figures

The Figure A.1 and A.2 are important to understand this document. In the appendix Figure A.4 on page 39 shows again the complete choreography.

Figure A.3 shows the usage of the package subcaption. It is indeed possible to reference to sub figures: Figure A.3a.

It is possible to convert SVGs to PDF directly during compilation. This is described in the source code of latex-tips.tex, but commented out.

A.7 More Illustrations

Figures A.4 and A.5 show two choreographies, which should further explain the facts. The second figure is rotated 90 degrees to demonstrate the pdf\lscap package.

Figure A.2: The example choreography. Now slightly smaller to demonstrate `\textwidth`. And also the use of alternative captions for the list of images. However, the latter is only conditionally recommended, because who reads so much text under a picture? Or is it just a matter of style?

Figure A.3: Example to place 3 illustrations next to each other. Further, it is possible to reference each separately.

Figure A.4: Example Choreography I

Figure A.5: Example Choreography II

A.8 Plots with pgfplots

The package `pgfplots` provides plotting of functions directly in \LaTeX like with `matlab` or `gnuplot`. Some visual examples are available [here](http://texdoc.net/pkg/visualltikz)².

Figure A.6: Plot of $\sin(x)$ directly inside the figure environment with `pgfplots`.

Figure A.7: Coordinates x and y read from csv file and plotted `pgfplots`.

A.9 Figures with tikz

The `tikz` is a package for creating graphics programmatically. With this package grids or other regular structures can be easily generated.

²<http://texdoc.net/pkg/visualltikz>

Figure A.8: A regular grid generated easily with two for loops.

A.10 UML diagrams using tikz-uml

Figure A.9 presents a class diagram typeset using tikz-uml.

A.11 UML diagrams using PlantUML

In case LuaLaTeX is used and PlantUML is installed, UML diagrams can be defined using PlantUML.

A.12 Linguistic Forests

Code:

```
\begin{forest}
  [VP
    [DP]
    [V
      [V]
      [DP]
    ]
  ]
\end{forest}
```

Result:

A linguistic tree diagram showing a VP node branching into DP and V'. The V' node branches into V and DP.

A.13 Tables

Table A.1 shows results and Table A.2 shows how numerical data can be represented in a table.

A.13.1 Tables with pgfplots

With the pgfplotstable package tables can be directly generated from a csv file.

Figure A.9: Class diagram generated with tikz-uml. Example adapted from Nicolas Kielbasiewicz.

A.15 Abbreviations

At the first pass, the Fehlerrate (FR) was 5. At the second pass was FR 3. The plural form can be seen here: error rates (ERs). To demonstrate what the list of abbreviations looks like for longer description texts, Relational Database Management Systems (RDBMS) must be mentioned here.

With `\gls{...}` you can enter abbreviations, the first time you call it, the long form is used. When reusing `\gls{...}` the short form is automatically displayed. The abbreviation is also automatically inserted in the abbreviation list. With `\glsp{...}` the plural form is used. If you want the short form to appear directly at the first use, you can use `\glsunset{...}` to mark an abbreviation as already used. The opposite is achieved with `\glsreset{...}`.

Abbreviations are defined in `\content\ausarbeitung.tex` by means of `\newacronym{...}{...}{...}`.

More information at: <http://tug.ctan.org/macros/latex/contrib/glossaries/glossariesbegin.pdf>

A.16 References

For distant sections “`\varioref`” is recommended: “See Appendix A.3 on page 34”. The command `\vref` works similarly to `\cref` the difference being that a reference to the page is additionally added. `vref`: “Appendix A.1 on page 33”, `cref`: “Appendix A.1”, `ref`: “A.1”.

If “`\varioref`” causes difficulties, then “`\cref`” can be used instead. This also creates the word “section” automatically: Appendix A.3. This is also possible for illustrations etc. In English please use `\Cref{...}` (with large “C” at the beginning).

A.17 Definitions

Definition A.17.1 (Title)

Definition Text

Definition A.17.1 shows ...

A.18 Footnotes

Footnotes are provided by the command `\footnote{...}`³. Citing footnotes is possible by providing a label `\footnote{\label{...}}...` and cite the footnote with `\cref{...}` in the text³.

A.19 Various Things

Code:

```
\begin{compactenum}[I.]
  \item You can also keep the numbering
compact thanks to paralist
  \item and switch to a different numbering
\end{compactenum}
```

Result:

- I. You can also keep the numbering compact thanks to paralist
- II. and switch to a different numbering

³Example footnote.

The words “workflow” and “dwarflike” can be copied from the PDF and pasted to a text file.

Code:

In case `\LuaLaTeX{}` is used as the compiler, there is no ligature at `\qq{f\l}` in the word `\qq{dwarflike}` (in contrast to `\qq{fl}` at `\qq{workflow}`).
In other words: `\qq{dwarflike}` and `\qq{dwarf\l/like}` look the same in the PDF.
In case they do not, there is an issue with `Lua\LaTeX{}` and the `selnolig` package.

Result:

In case `LuaLATEX` is used as the compiler, there is no ligature at “fl” in the word “dwarflike” (in contrast to “fl” at “workflow”). In other words: “dwarflike” and “dwarflike” look the same in the PDF. In case they do not, there is an issue with `LuaLATEX` and the `selnolig` package.

A.20 Closing remarks
